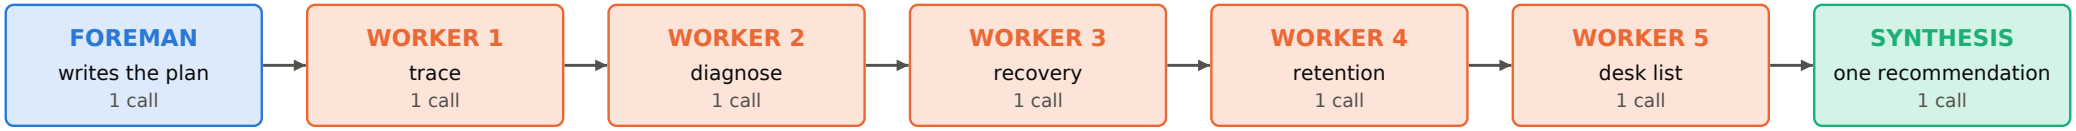
E5 · Orchestrator-Workers, Drawn

One live run, seven calls. The shape is code; the plan inside it was written by the model.

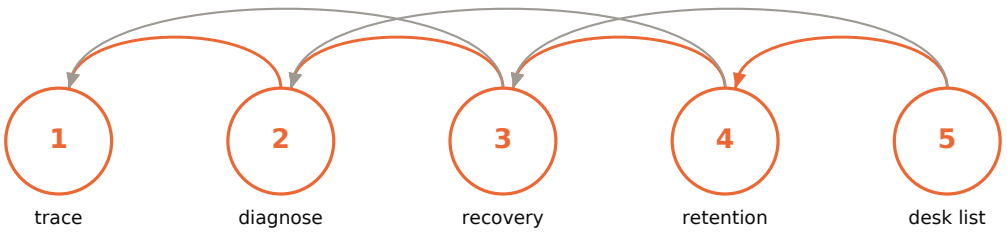
A · THE SHAPE (fixed by code: foreman first, workers in plan order, synthesis last)



7 calls for one decision. Chaining (E2) did it in 2, voting (E4) in 3. The extra five bought a plan you did not write and five scoped answers.

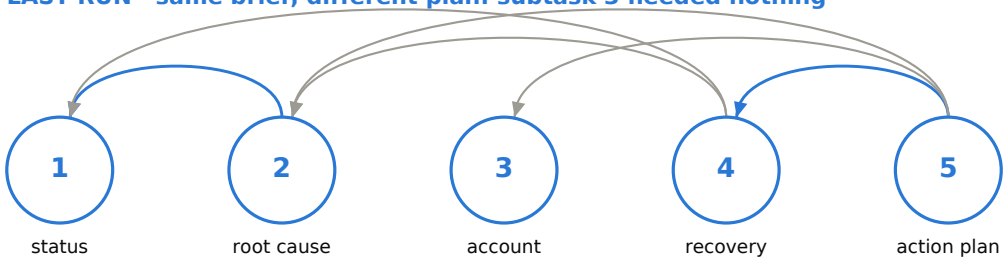
B · THE PLAN AS A GRAPH (an arrow means 'waits for'; the model drew these, the code only obeyed them)

THIS RUN · a chain: every subtask waits for the one before it



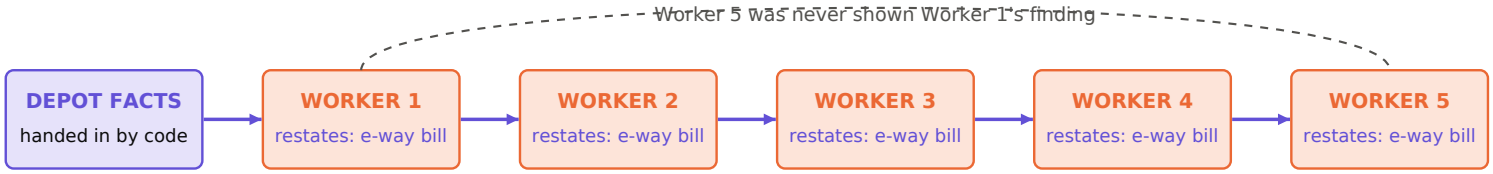
Longest path 5 of 5. Nothing could run in parallel even if the code tried. Thick arrows: the chain. Thin: extra needs pointing further back.

LAST RUN · same brief, different plan: subtask 3 needed nothing



Longest path 4 of 5; subtasks 1 and 3 were independent. Same model, same brief, a different plan. The content is the model's; only the shape is yours.

C · HOW ONE FACT TRAVELLED (context isolation limits what a worker is handed, not what earlier workers chose to repeat)



'Missing e-way bill' entered at Worker 1 and reached Worker 5's desk list because 2, 3 and 4 each restated it in their own findings. Isolation is a limit on inputs, not a wall.

What each worker did with what it was given

WORKER 1 · trace

handed: depot facts only

USED
- CUSTOMS_HOLD
- missing e-way bill
- 3 days late
- BlueDart, Delhivery

SAID WAS MISSING
- event timestamps
- handover point

WORKER 2 · diagnose

handed: finding of 1

USED
- documentation issue
- not weather, breakdown, capacity

SAID WAS MISSING
- cargo condition

WORKER 3 · recovery

handed: findings of 1, 2

USED
- file the bill: same-day release
- reassigning cannot help: the hold follows the shipment

SAID WAS MISSING
- ETAs, rates, hub location

WORKER 4 · retention

handed: findings of 2, 3

USED
- tell Padma plainly
- 2 days from release
- apologise for 3 days

SAID WAS MISSING
- authorised credit limit

WORKER 5 · desk list

handed: findings of 3, 4

USED
- file by midday
- checks at 2 pm, 5 pm
- call Padma this morning

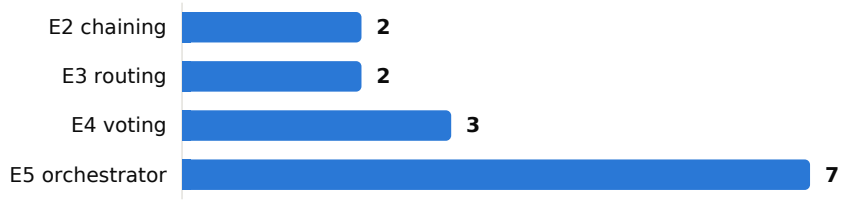
SAID WAS MISSING
- carrier hold-desk contact

Five workers, zero invented facts, five declared gaps. The synthesis turned two gaps into actions: pull the carrier contact from the agreement, confirm the credit limit before quoting a figure. On the Sonnet run one worker invented rupee costs from the same facts.

E · THE SYNTHESIS OBEYED 'THREE SENTENCES AT MOST' · words per sentence

Three sentences, 152 words. The limit was on the count and the model honoured the count. Nothing in the code measured length; a word-count gate would have sent it back.

F · CALLS FOR ONE DECISION ON THE SAME BRIEF



Three and a half times the cost of chaining. Worth it when the brief needs a plan you cannot write in advance; not worth it for an apology.

FOR THE EXAM

shape is code, plan is the model's · dependencies come from the model, and so does the parallelism · isolation limits inputs, not repetition
facts handed in by code stop invention · soft limits are honoured literally · the cost is per decision, not per call
